

Serial No.: 10/053,456
Art Unit: 2622

Claims

The following is a copy of Applicant's claims:

1. (Previously presented) An apparatus for capturing digital images, comprising:
an image sensor including a plurality of image capture elements, each of the image capture elements configured to capture image data;
an input element for communicating print size information to the apparatus;
and
means for determining which of the plurality of image capture elements correspond to the print size.
2. (Original) The apparatus of claim 1, wherein each of the plurality of image capture elements is used to capture the image data and only a portion of the image data is presented to a user.
3. (Original) The apparatus of claim 1, wherein a portion of the plurality of image capture elements is used to capture the image data and only the captured image data is presented to a user.
4. (Original) The apparatus of claim 1, wherein the print size aspect ratio corresponds to the aspect ratio of the image sensor.
5. (Previously presented) The apparatus of claim 1, further comprising means for presenting an image capture template to a user of the apparatus.

Serial No.: 10/053,456

Art Unit: 2622

6. (Original) The apparatus of claim 5, wherein the image capture template provides a visual reference to the plurality of image capture elements that correspond to the selected print size.

7. (Original) A method for adapting a print size to a captured image in a digital image capture device, the method comprising the steps of:

providing an image sensor including a plurality of image capture elements;

determining the elements of the image sensor that correspond to a selected print size; and

presenting image sensor data corresponding to the selected print size to a user of the image capture device.

8. (Original) The method of claim 7, further comprising the steps of:

capturing image sensor data using all of the image capture elements; and

presenting image data from only those image capture elements corresponding to the selected print size to a user of the image capture device.

9. (Original) The method of claim 7, further comprising the step of capturing image sensor data using only those image capture elements corresponding to the selected print size.

10. (Original) The method of claim 7, further comprising the step of printing the image sensor data corresponding to the selected print size.

Serial No.: 10/053,456

Art Unit: 2622

11 (Original) The method of claim 7, further comprising the steps of:
presenting the image sensor data to a user of the image capture device; and
superimposing an image capture template over the image sensor data, the
image capture template providing a visual reference on a display.

12 (Original) The method of claim 11, wherein the visual reference corresponds
to the image sensor data.

13 (Original) The method of claim 11, wherein the image capture template is
fixed.

14 (Original) The method of claim 11, wherein the image capture template is
variable.

15 (Original) The method of claim 11, wherein a plurality of image capture
templates are made available to a user of the image capture device.

16 (Original) A computer readable medium having a program for adapting a print
size to a captured image in a digital image capture device, the program including logic
for performing the steps of:

determining the elements of an image sensor that correspond to a selected print
size; and

presenting image sensor data corresponding to the selected print size to a user
of the image capture device.

Serial No.: 10/053,456

Art Unit: 2622

17 (Original) The program of claim 16, further comprising logic for performing the steps of:

capturing image sensor data using all of the image capture elements associated with the image sensor; and

presenting image data from only those image capture elements corresponding to the selected print size to a user of the image capture device.

18 (Original) The program of claim 16, further comprising logic for performing the step of capturing image sensor data using only those image capture elements associated with the image sensor that correspond to the selected print size.

19 (Original) The program of claim 16, further comprising logic for performing the step of printing the image sensor data corresponding to the selected print size.

20 (Original) The program of claim 16, further comprising logic for performing the steps of:

presenting the image sensor data to a user of the image capture device; and

superimposing an image capture template over the image sensor data, the image capture template providing a visual reference on a display.

21 (Original) The program of claim 20, wherein the visual reference corresponds to the image sensor data.

22 (Original) The program of claim 20, wherein the image capture template is fixed.

Serial No.: 10/053,456
Art Unit: 2622

23 (Original) The program of claim 20, wherein the image capture template is variable.

24 (Original) The method of claim 20, wherein a plurality of image capture templates are made available to a user of the image capture device.

25 (Previously presented) An apparatus, comprising:
a computer readable medium having a program for adapting a print size to a captured image in a digital image capture device by:
determining the elements of an image sensor that correspond to a selected print size; and
presenting image sensor data corresponding to the selected print size to a user of the image capture device.
